## NEWS RELEASE

### OUTCOME ENABLES EFFECTIVE MANAGEMENT OF INPATIENTS WITH DIABETES

#### *Inpatient Diabetes PMT™ Solution Released to Improve Quality of Care and Compliance with Requirements for In-Hospital Management of Diabetes Patients*

**Cambridge, Mass. – May 14, 2007**– Outcome Sciences, Inc. (OUTCOME), the leading provider of registries and quality improvement solutions, announced today the availability of its Inpatient Diabetes PMT™ solution to help hospitals demonstrate and improve inpatient diabetes care in accordance with the American Diabetes Association’s recommendations. Inpatient Diabetes PMT is specifically designed to assist hospitals in improving outcomes and in obtaining recognition for distinction through such programs as the Joint Commission’s Certificate of Distinction for Inpatient Diabetes Care.

Built on OUTCOME’s web-based platform for hospital quality measurement which is currently used in more than 2,000 U.S. hospitals, Inpatient Diabetes PMT tracks key data variables, generates extensive reports and benchmarks, and provides hospitals with an online toolkit to assist in implementing inpatient diabetes care.

“The excess morbidity and mortality associated with inpatient diabetes and hyperglycemia has been well-documented, and implementation of effective inpatient diabetes programs promises to save lives,” said Richard Gliklich, MD, president and CEO of OUTCOME. “Inpatient Diabetes PMT provides hospitals with a turnkey solution for implementing consensus guidelines in diabetes and a means for hospitals that are focusing on the problem of inpatient glycemic control, to further distinguish themselves through certification programs like the Joint Commission’s.”

Inpatient Diabetes PMT joins a suite of tools in the Outcome TotalQuality™ web-based programs, which includes a large number of quality measurement modules across a range of diseases, such as stroke, heart failure, myocardial infarction, pneumonia, orthopedics, and infections.
